Slides 1-2
This presentation would be appropriate for courses on Adult Health and Mental Health, Family and Child Policy, Family Violence, Organization and Community Practice, Practice with Women, Violence and Anti-Social Behavior

Slide 3
Review slide. What might be some examples of targeted interventions?

Slide 4
Review slide

Slide 5
Review slide. Discuss possible reasons why these four factors are associated with acquaintance sexual assault.

Slides 6-9
Review slides.

Slide 10
Review slide. Discuss possible reasons why positive relationship expectancies about the assailant are associated with sexual assault.

Slide 11
Review slide. What might be some examples of precautionary habits?

Slide 12-14
Review slide.

Slide 15
Review slide. Given the high proportion of white participants, what might it mean for the generalizability of the findings across racial/ethnic groups?

Slide 16
Review slide.

Slide 17
Review slide. Discuss possible reasons why the researchers chose to focus on college students.

Slides 18-24
Review slides. Discuss any possible limitations to the study method.
Slide 25-29
Review slides.

Slide 30-37
Review results.

Slide 38
Review slide. Given the results on how contextual factors can affect women’s vulnerability to sexual assault, what are some possible practice implications?

Slide 39
Review slide

Slides 40-41
Review slides. What, if any, role do the universities have in reducing alcohol use among students?

Slides 42-45
Review slides.

Slide 46
Review slide

Class Activity:
Divide the class into four groups. Assign a sexual assault victim profile to each group (1. Victimization-relationship; 2. Alcohol-victimization; 3. Alcohol-low else; 4. Relationship-precautionary). Using the findings of this study, develop and intervention to specifically address the needs of your victim subgroup. Have each group present their interventions. Are their similarities/differences? Discuss the feasibility of these targeted interventions.
